QUESTIONS OF THE WEEK

Editor's note: Here are the questions asked most frequently by Virginia farmers during the past week, as reported by county agricultural agents. Staff members of the VPI Agricultural Extension Service and/or Experiment Station supply the answers.)

Q. Can heptachlor in fertilizer be used at seeding time to control the alfalfa weevil?

A. No! The insecticide applied in this manner would no no good.

Q. What can I seed for a good lawn?

A. Variations in lawn grass mixtures are endless. For suggestions ask your county agent, or write the VPI Agricultural Extension Service, for a free copy of Bulletin 243, "Lawns for Virginia."

Q. I am having trouble with pear and apple tree blight. What can I do?

A. Not much now, except to prune out dead wood and avoid fertilizing the trees. Antibiotic sprays applied during the blossom period will effectively prevent this disease.

Q. How can I control crabgrass in my lawn?

A. Good cultural practices are the basis for any weed control program. Certain chemicals can be used as a supplement to good management. Phenyl mercuric acetate is best to use early in the crabgrass season while either potassium cyanate or disodium monomethylarsonate would be better later in the summer.

Firemen Answer Dream

Tuscaloosa, Ala.- Firemen were routed from their sleep at 1:30 A. M. recently to answer a call from a woman who dreamed her house was on fire, woke up, and phoned in the alarm.

Odd Apetite

Ontario, Canada.- Two blonde bears who scrounge for food in a garage near a resort at Rainy Lake, have a strange appetite. They will eat only potato peelings which have been doused with gasoline preparatory to burning.

The most important matter before the American people today is the fight against inflation.

The trouble with speakers is that they shout too loudly for the little they have to say.

Courtesy is so cheap that most people take no interest in it.
